My WORKPLACE M.S.D. PREVENTION CONSULTING PRACTICE has been very successful over more than 30 years at approximately 600 workplaces. That is a LOT of experience. It has taught me much about how to accomplish the mission of markedly reducing workplace MSD, while earning a great PT practice cash-based, non-insurance income.

This practice format can be readily replicated by other PTs. To facilitate that, I have assembled my entire prevention consulting practice into a digital "kit" that allows PTs to easily replicate my practice.

This digital "kit" in two parts.

Part One.. includes all my practice documents: prevention program protocols and tools, supportive scientific evidence and foundations that support best-practice MSD prevention tactics, detailed marketing protocols and materials, outcomes data, marketing plan and business plan suggestions.

Part Two.. includes the "guts" of our on-site programs... the PowerPoint training programs that client workplaces hire us to provide. These include our Back School, Neck-Arm Overuse School, the combined MSD SCHOOL (what most workplaces seek from us), Office Ergonomic School (also much in demand from workplaces), and Age*Less The Aging Worker School (rapidly growing demand by workplaces). These are two-hour employee training sessions. We also include scripts of our training session lecture content, plus digital handout materials, and an audio file of one of our presentations.

PTs using our program can use our website for client workplaces to preview the services at www.impacc.com, as well as our impacc Facebook page for ongoing updates. We are very available to PTs on a daily basis to answer questions and challenges (at this point in our history we have handled them all).

You can preview the kit at www.smartcarept.com and go to N-L-T page (No-Lost-Time program). Our new blog at hebertphysicaltherapy.com also provides lots of support guidance.

COST... We offer this kit for \$600 (not bad when you recoup that cost with only a half-day of consulting at a client workplace).

You can access continuing education on this specialty at www.educata.com plus a newer program at the Orthopedic Section of APTA, entitled "The Injured Worker" Course 24.1 at <http://www.orthopt.org/product/the-injured-worker>
